```
#include <stdio.h>
#include <conio.h>
int main ()
{
    int a, b, c;
    clrscr();
    printf("Enter the three values");
    scanf("%d %d %d", &a, &b, &c);

    if (a > b) {
        if (a > c)
            printf("a is biggest : ", a);
        else
            printf("b is biggest : ", c);
    } else {
        if (b > c)
            printf("b is biggest : ", b);
        else
            printf("c is biggest : ", c);
    }

    return 0;
    getch();
}
```

Expected output:-

Enter the three values = 20

15

30.

c is biggest:

short  
cut.

programming.

+ - 4

$(6 = 6)$

$6 * (5 * 10 + 10)$

$\frac{1}{2} = \frac{1}{5}$
